

Empty Toilet Paper Tube Ocarina

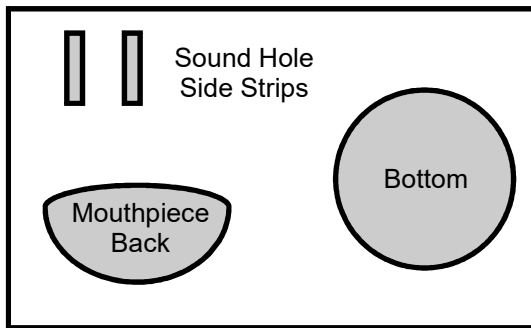

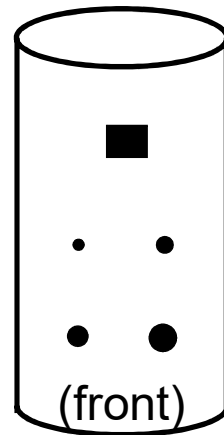

What you need:

- A few empty toilet paper tubes
- Superglue
- Scissors and/or other sharp tool
- A nail file

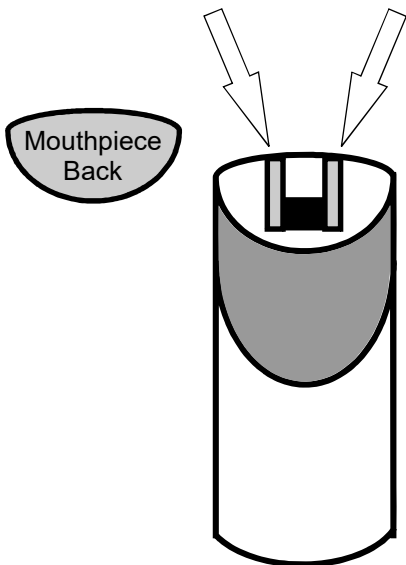

First, cut one roll in half then cut out the shapes needed below

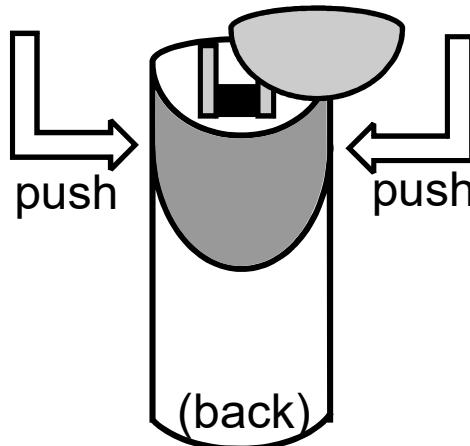

Now, put 4 small holes into another roll and 1 square hole about 1/2" from top of tube

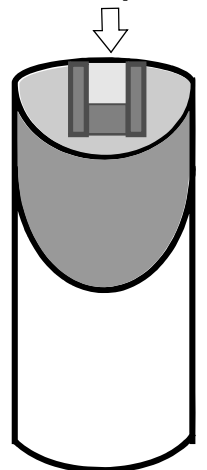

Glue strips on either side

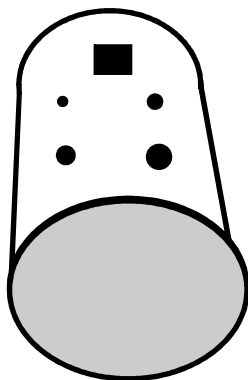

Next, push in this area in so that it "demples" in and carefully glue the Mouthpiece Back to the dempled piece along the edge - carefully glue the back to strips

"Hollow" air channel between strips

Lastly, glue the bottom circle on focusing on sealing the edges thoroughly

Troubleshooting:

If your ocarina is not playing, it is likely 1 of 2 things. Either the seams where it is put together are leaking air or, most likely, the sound hole/air track area need a little fine tuning. Trial and error are the only solutions, hang in there!

Playing

Covered holes are white - chart reads from low to high (left to right)
